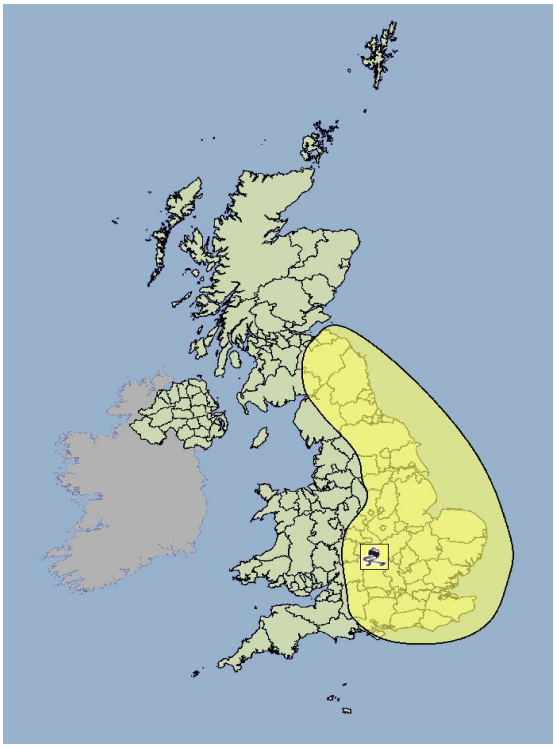
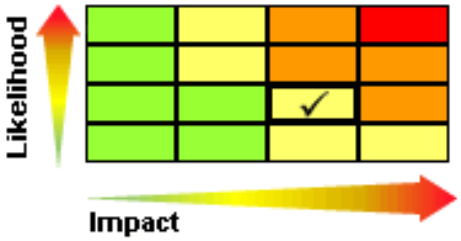
National Severe Weather Warning Service





Chief Forecasters Assessment
Following the eastward clearance of Thursday's rain, sleet and snow across southern Britain, falling temperatures will lead to ice forming rapidly on untreated surfaces here. A further weather system running southwards may briefly bring some sleet or snow to northern and eastern parts of the warning area. The extent of any snow remains uncertain.

The Met Office have issued a **Yellow Warning** of **Ice**

Valid from **00:05 on Fri, 13th Jan 2017** until **11:00 on Fri, 13th Jan 2017**

Ice is expected to form on untreated surfaces on Thursday night and last into Friday morning. In addition, some outbreaks of sleet and snow are likely to run quickly southwards on Friday morning, chiefly affecting parts of northern and eastern England, clearing the extreme southeast by late morning. This may give local accumulations of one to two cm and add to icy conditions in places.

Ice will lead to the risk of disruption with difficult driving conditions and expect longer journey times. The greater risk of disruption is across the Midlands, East Anglia and southeast England.
